The Multi-Format Content Repurposer

Turn 1 article, newsletter, or transcript into 4 targeted distribution assets in seconds—free and 100% private.

🚀 Maximum Reach With Minimal Effort

Most creators and strategists spend hours writing a great article, only to post a bare link that nobody clicks. This tool instantly converts a single piece of long-form writing into a conversational LinkedIn post, a 5-tweet X thread, an email newsletter summary, and a community discussion prompt—ready to copy and publish.

1. Overview: How It Works

📝 1 Single Input

Paste any long-form blog post, YouTube/podcast transcript, or rough notes into the left panel.

⚡ 4 Native Outputs

Automatically generates 1 LinkedIn Post, 1 X/Twitter Thread, 1 Email Blurb, and 1 Discussion Prompt.

📋 1-Click Clipboard Copy

Each output card has an independent copy button with instant feedback.

🔒 Completely Private

Everything runs directly in your local browser window. No drafts or text are ever uploaded to cloud servers.

2. Quick-Start Guide (30 Seconds)

STEP 1

Open the Repurposer

Double-click `repurposer.html` in your file explorer. It will open instantly in Chrome, Edge, Safari, or Firefox.

STEP 2

Paste & Click

. Type your headline, paste your text (or click "Load Sample" to test), and click `⚡ Repurpose Into 6 Formats`

STEP 3

Copy & Publish

Click the "Copy" button on any card to grab the ready-to-post text directly to your clipboard.

3. The Source Code (`repurposer.html`)

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <title>Multi-Format Content Repurposer | 3Sci Open Source Work Hack #3</title>

    <span>100% Client-Side • Zero Cloud Telemetry</span>
  </footer>
</body>
</html>
```

4. How to Adapt & Customize Output Formats

You can easily adjust the structure of the outputs to match your personal writing voice:

CUSTOMIZATION 1

Changing Hashtags & Call to Actions

Open `repurposer.html` in Notepad, locate the `linkedinPost` variable, and swap in your brand hashtags or newsletter sign-up links.

CUSTOMIZATION 2

Adding a Fifth Format (e.g., Short Video Script)

You can add a 5th card to the output grid (like a 60-second TikTok / YouTube Short hook script) by duplicating an output card in the HTML and appending the formatting logic in the script function.

✨ Always ask your preferred AI platform if you need help updating code!

If you want to add new social formats (such as Instagram carousel copy or a podcast host introduction), simply paste your `repurposer.html` file into ChatGPT, Claude, or Gemini with this prompt:

"Here is my repurposer.html file. Please preserve all clipboard copy functions and styling, but add an extra output card that generates a 60-second video script based on the input text."

Your AI will format the entire code block cleanly so you can copy, paste, and run.
